Tracy Farrell

To whom it may concerned:

My name is Tracy Farrell, In 1989 I was going to a dinner engagement with then b/f, who was driving our car (a stickshift) with him, myself and our then 3 month old daughter. When our car stalled, worried that we were sitting on a major highway at the bottom of a hill where semi's often use on their way to truck stop or to head out of town, would come down the hill and hit us possibly hurting or killing one or all of us, I got out of the car to start to push our car off the road, Onlookers started to run over to help when a Cadillac came down the hill hitting me crushing me between her car a 1981 steelbodied Cadillac, after hitting me the driver backed up drove around my body lying on the ground and drove off. The damage was extensive mainly when she hit me i ended up with a crushed knee that had to be rebuilt using my bone marrow, skin and other needed grafts to try to repair the damage, including open holes to the bone blood and bone infection on top of a cracked pelvis two broken ankles discs messed up in my neck and my back a crack in my spine I As a result i have fibro, cfs, rsd, compermised immune system I could go on listing the damage but I would rather look forward and help other people who suffer from these and many other disorders such as the ones i mentioned and XRMV which what we need is a test for DX and more research . Please!!II I would love to come to speak to all of you in person can not go to DC because of funding issues (i get 361 dollars a month in disability with no other help such as welfare money, insurance health care nothing like that,(not that i want it) my point being IF i could i would speak to the funding needed to help so many people that suffer everyday without an ending, a constant state of frustration depression and all of the other endless struggles of day to day living (if we were an animal in this much pain we would of been put down already/ty for taking time to read my letter respectfully

Tracy Farrell
