

The Second National Immunization Congress

Sarah Duggan Goldstein, MPH and L.J Tan, MS, PhD
American Medical Association

2007 Immunization Congress

- February of 2007, co sponsored by AMA and AAP
- Engaged leaders in both adult and pediatric immunization to encourage participation from diverse stakeholders
- Addressed financing, access and infrastructure barriers

2007 Congress Task Forces

- Public Private Financing, 317, Underinsured populations, Adult Immunizations, Adolescent Immunizations, and “Quick win”
- Spurred studies on challenges associated with vaccine purchase, administration and reimbursement and NVAC pediatric financing recommendations
- Increased awareness and commitment to adult vaccine issues
- Expanded the AAP pediatric business case for adults with input from AHIP and other stakeholders
- Supported and encouraged the work of the 317 coalition
- Issued Adolescent roadmap guidelines.

2010 Immunization Congress

- Approximately 85 participants, representing vaccine manufacturers, providers, pharmacy, public health and payers.
- Co-Sponsored by AMA, AAP and ASTHO
- Encouraged discussion, networking and feedback, particularly with changes impending from implementation of PPACA
- Agenda focused on public and private financing, with additional focus on adult infrastructure challenges and continued adolescent gaps.

Immunization Congress Goals:

2007

- Understand the issues facing all vaccine providers in the United States
- Receive input from multiple sources
- For adult stakeholders – learn from the pediatric model to improve adult coverage
- For pediatric stakeholders, act before rates drop!
- Facilitate public and private cooperation

2010

- Explore implementation options for NVAC, AAP, IDSA and AMA vaccine financing recommendations.
- Identify non-financial barriers (e.g., infrastructure) to adult and adolescent immunizations
- Highlight lessons learned from pediatrics to apply to the adolescent and adult worlds
- Develop an action plan to maximize the opportunities created from health care reform

Theme Identification

- Consensus driven
- Focusing on 2-3 themes from each session
- Action oriented
- Dynamic

Preliminary Theme Identification: Adult Infrastructure

- Part B vs Part D
- VFC/underinsured for adults
- HIT for adults/registries
- Sufficient venues/providers of adult vaccine
- Increasing adult patient education and demand for vaccines
- Motivating and educating private sector adult providers
- Engaging the public health system to take on adult immunization as a priority

Next Steps

- Survey of Congress participants to identify themes
- Formation of task forces for each set of themes
- Congress participants will identify which task forces they would like to assist with
- Development of action plan for each task force

Next Steps

- Meeting proceedings submitted for publication in *Vaccine*
- Publication of Full Meeting Summary
- Development of website for information and material dissemination

Preliminary Theme Identification: Private Financing

- Creating sound reimbursement methodology- are percentages really the way to go?
- What other data is needed?
- Cost as a barrier to entry for adult providers
- Cost as barrier to introduction of new vaccines in pediatric practices
- Payment for increased time spent counseling patients or compensating for a change of mind/loss of that vaccine
- Access ensured by health system reform is not the same adequate payment- how do we ensure payment for both cost of vaccines and vaccine administration is adequate?
- Education of new combination vaccine codes in 2011

Preliminary Theme Identification: Public Financing

- Improving Medicaid vaccination reimbursement rates to incentivize states to include preventive services coverage for non-elderly beneficiaries
- Financing stream specifically for adult vaccines, perhaps similar to VFC
 - Some concern over unintended consequences especially with ACA in place?
- Vaccine counseling codes

Preliminary Theme Identification: The Adolescent Gap

- School located vaccination venues (including billing and reimbursement)
- Other community located vaccination venues
- Improving missed opportunities and awareness at the provider office
- Alternative models for encouraging adolescent preventive care
- Increasing demand by raising awareness among teens and their parents/caregivers
