PROGRAM DESCRIPTION

The HCET Clinton County Youth RISE! (Responsible, Involved, Supported and Educated) Project provides age-appropriate, medically accurate, and evidence-based teen pregnancy prevention programming to youth and their parents in Clinton County, Indiana. HCET collaborates with youth, parents, and local leaders on the selection and implementation of its interventions to ensure community buy-in and increase program efficacy.

GOALS

1. Improve participants’ behavioral, social, emotional, and sexual health outcomes
2. Provide participants with knowledge and skills to prevent HIV, other sexually transmitted diseases (STDs), and unplanned pregnancy
3. Increase effective communication between youth and parents or other trusted adults about sex and healthy relationships
4. Reduce the Clinton County teen birth rate

As a parent, I can open the door to let my son know that he can come to me if he starts to notice something different, has a question, or is concerned about something. Prior to this class, I had decided that I was just going to wait until he said something, and now I feel empowered to take the first step.

- Youth RISE! Project parent participant

PROGRAM SNAPSHOT

Population
Students in grades 6-12 and their parents or other trusted adults, predominantly Hispanic/Latino and white

Location
Clinton County, Indiana

Partners
Healthy Communities of Clinton County Coalition, Learning Network of Clinton County, and Purdue Extension of Clinton County.
STRATEGIES

School-based interventions
The Youth RISE! Project implements two evidence-based programs in school-based settings: Draw the Line/Respect the Line at the middle school level and Reducing the Risk at the high school level. Through lessons with parents and activities with students—including lectures, role plays, games, small group work, and guest speakers—the programs provide youth with sexual health information and develop youths' decision-making, limit-setting, and refusal skills. To support the programs, Youth RISE! has conducted ongoing training and technical assistance with teachers, school support staff, and implementation partners on topics such as STD/HIV prevention, evaluation and monitoring tools, inclusivity, and cultural competency.

Family-based lessons
The Youth RISE! Project implements a third evidence-based program in community-based settings: Families Talking Together (FTT) targets parents of 10- to 14-year-olds and aims to increase parent-child communication about sexual health, decision-making, relationships, and family values and expectations. Using medically accurate and age-appropriate information, FTT provides parents with an 11-module workbook with sexual health conversation topics, tips on communication and relationship building, and strategies for parental monitoring. Parents meet one-on-one or in small groups with a trained coach to discuss the curriculum and build communication skills.

Community-based approach
The Youth RISE! Project uses a community-based approach, integrating the perspectives of local youth, parents, professionals, and leaders into the program. Through participation in the Youth Leadership Council (YLC), a diverse group of adolescents meet monthly to offer a youth perspective on aspects of the program. The Community Advisory Board, composed of parents, professionals, and YLC members, meets bi-monthly to support the YLC's ideas, events, and projects. Program staff collaborated with both councils and other local leaders to select the Youth RISE! Project's interventions and ensure they were linguistically and culturally appropriate for the community.

About the TPP Program
The Office of Adolescent Health Teen Pregnancy Prevention (TPP) Program is a federal grant program that funds diverse organizations working to prevent teen pregnancy across the United States. OAH invests in both the implementation of evidence-based programs and the development and evaluation of new and innovative approaches to prevent teen pregnancy. The OAH TPP Program reaches adolescents age 10-19, with a focus on populations with the greatest need in order to reduce disparities in teen pregnancy and birth rates.
