

2014 – 2015 “Stem” ICD-9 Diagnosis Codes to HHS-HCC (Hierarchical Condition Category) Mapping

The list of codes below represents three (3) and four (4) digit ICD-9 “stem” diagnosis codes that are the base codes of the fully specified ICD-9 diagnosis codes published by the Centers for Medicare & Medicaid Services (CMS)

(<http://www.cms.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/codes.html>). In addition, the HCC mappings are provided for each stem code. *Where a fully specified ICD-9 diagnosis codes did not map to the same HCC, the “stem” Diagnosis Code was mapped to the lowest HCC, including no HCC assignment.*

The fully specified ICD-9 diagnosis codes are the expected values for External Data Gathering Environment (EDGE) server submissions. The “stem” ICD-9 diagnosis codes and the HCC mappings listed below are not intended as a long-term solution for issuers who do not currently enforce the use of fully specified ICD-9 diagnoses codes.

The inclusion of “stem” ICD-9 diagnosis codes and HCC mapping is a **temporary** solution for 2014 and 2015 benefit years only. For 2014 and 2015 benefit year risk adjustment (RA) calculations, CMS will accept “stem” ICD-9 diagnosis codes and will map them to a HCC, if appropriate.

Please Note: CMS highly encourages all issuers to use fully compliant International Classification of Diseases, Ninth Revision (ICD-9) diagnosis codes with all submissions as soon as possible. **ICD-9 diagnosis codes will be accepted for claims through September 30, 2015; ICD-10 diagnosis codes become effective October 1, 2015.**

Beginning January 1, 2016, issuers must be compliant with Health Insurance Portability and Accountability Act (HIPAA) Standards for Electronic Transactions

(<http://aspe.hhs.gov/admsimp/final/txfin00.htm>) and only use fully specified diagnosis codes.
