2020: A Retrospective Look at Healthcare Cybersecurity

02/18/2021
Agenda

• Vulnerability points in hospitals
• 2020 Healthcare overview – a snapshot
• Ransomware
• Data Breaches
• Blackbaud
• COVID-19 and its implications for healthcare cybersecurity
• Other fraudulent activity
• References
• Questions

Slides Key:

- **Non-Technical:** Managerial, strategic and high-level (general audience)
- **Technical:** Tactical / IOCs; requiring in-depth knowledge (sysadmins, IRT)
Vulnerability points in hospitals

**Networks**
Hospital networks without tight access control can let hackers breach one point and move freely within.

**Records Disposal**
Privacy can be compromised by improper disposal of sensitive information.

**Internet of Things**
Connected medical devices often lack built-in security features.

**Remote Work**
Security risks increase with remote Covid-19 testing and vaccination sites, coupled with more nonmedical staff working from home.

**Data Storage**
Storing electronic medical records, payment and insurance details in a single place increases potential damage from ransomware attackers.

**Personal Devices**
Doctors and nurses add to vulnerabilities by connecting personal devices to the hospital network.

What did 2020 look like for healthcare cybersecurity?

- **VMWare/Carbon Black:**
  - 239.4 million cyberattacks attempted in 2020

- **Average of 816 attempted attacks per healthcare endpoint**
  - 9,851% increase from 2019
  - Between January and February: 51% increase
  - Increased throughout year
    - Peaked September/October at 87% increase

- **Emsisoft Ransomware statistics for 2020**
  - 560 healthcare organizations impacted

- **Wall Street Journal (HHS):** ~1M healthcare records breached each month last year
  - One breached service provider is estimated to be responsible for ~10M breached records

- **Patient in Germany died when being re-routed to another healthcare facility during ransomware attack**

- **Ransomware-as-a-service became standardized; Double extortion became popular**

- **COVID-19 themed cyberattacks began along with the pandemic**
The United States continues to be one of the most targeted countries in the world.

Rate of ransomware detections in 2020
Ransomware vs. Healthcare in 2020, Part 2

Noteworthy HPH ransomware targets:

- Fortune 500 Healthcare provider based out of Pennsylvania
  - 250 US hospitals lost use of their systems for 3 weeks

- Health network in Vermont
  - 5,000 systems disrupted
  - Furloughed 300 staff
  - Estimated costs at $1.5M/day

- May 2020: Coveware finds that ransomware causes an average of 15 days of downtime for EHRs

- Double-extortion expanded from exclusively Maze to 18 ransomware operators in 2020

- Ransomware statistics for 2020
  - 80 incidents (560 healthcare organizations impacted)
  - Ambulances were rerouted
  - Radiation treatments for cancer patients were delayed
  - Medical records were rendered temporarily inaccessible and, in some cases, permanently lost
  - Hundreds of staff were furloughed
  - On healthcare organization in Vermont furloughed 300 staff, estimated the cost at $1.5M/day
  - PHI and other sensitive data was stolen and published online in at least 12 incidents
Ransom Payments By Quarter

Average Ransom Payment
Median Ransom Payment

Average Ransom Payment
$154,108
-34% from Q3 2020

Median Ransom Payment
$49,450
-55% from Q3 2020

Source: https://www.coveware.com/blog/ransomware-marketplace-report-q4-2020
• In addition to ransomware attacks, data breaches are the other major plague to healthcare in cyberspace
  o These two attacks are often combined
• Ransomware attacks were responsible for almost 50% of all healthcare data breaches in 2020
  o 19 leakers/sites double extortion
• Healthcare is the most targeted sector for data breaches.
• CI Security 2020 data:
  • 630+ total healthcare organizational breaches
  • 29 million healthcare records breached
Breaches by Industry

- Travel: 4.2%
- Entertainment/Food: 9.3%
- Finance: 7.3%
- Technology: 15.5%
- Oil/Gas/Energy: 1.8%
- Manufacturing: 3.0%
- Education: 13.0%
- Healthcare: 24.5%
- Government: 12.5%
- Retail: 7.3%
- Media/News: 1.1%
The total number of reported breaches among healthcare organizations increased by 36% from 270 in the first half of 2020 to 366 in the second half of the year.

The number of individual patient records that were breached in the second half of 2020 nearly tripled compared to the first half of the year from 7,691,199 to 21,358,070.
Breaches: Cause and size

- The top eight breaches reported to the Department of Health and Human Services involved 500,000 records or more
  - Over 6.5 million records total were reported
- 75% of all records exposed in the second half of 2020 were due to compromised business associates.
- Specific types of healthcare organizations targeted:
  - Life science labs
  - Research labs
  - Rehabilitation facilities
  - Hospital systems
  - Generic healthcare organizations

Of the 21.3 million records breached in the second half of 2020, 97% were attributed to malicious hacking incidents, rather than other causes such as unauthorized disclosure, improper disposal, theft, or loss.
Blackbaud: What Happened?

Who is Blackbaud?

- Managed IT services provider that serves nonprofits
- Based in South Carolina and is publicly traded
- Claims 25,000+ clients in 60+ countries
- Awards:
  - Forbes: Leading Employer for Diversity
  - Fortune: 56 Companies Changing the World
  - IDC: Top 40 Global Cloud Software Service Providers

What are the details of the attack?

- It was disclosed on July 16, 2020 that they were the victim of an unnamed ransomware attack, and they had paid the ransom.
- Confirmed attackers were able to gain access to some customers' unencrypted banking information, login credentials, and social security numbers.
- In November 2020, they confirmed they had been named as a defendant in 23 putative class suits.
- They have received over 160 claims related to the attack.
- 200 organizations (many in the healthcare sector) and millions of individuals have been impacted.
A sample set of compromised healthcare organizations is on the right. This list does not represent every healthcare organization impacted by Blackbaud.

It is believed that about 10 million records were breached.

Some of these are subject to change as updated information becomes available.

Blackbaud had to spend over $3 million to deal with the attack’s aftermath between July and September 2020, and it also recorded almost $3 million in accrued insurance recoveries during the same time period.

“…the COVID-19 pandemic provides criminal opportunities on a scale likely to dwarf anything seen before. The speed at which criminals are devising and executing their schemes is truly breathtaking.”

- Michael D’Ambrosio, Head of the U.S. Secret Service Office of Investigations

Terry Wade, lead of the Federal Bureau of Investigation Criminal, Cyber, Response and Services Branch.

WashingtonPost.com, April 14, 2020

"...the risk to this sector will be elevated throughout this crisis."

- FireEye, as part of an analysis of cyber threats to the healthcare industry during the coronavirus pandemic
In many cases, these domains will host malware. The attack vector can be any number of options, such as phishing, watering-hole attacks and typosquatting.

According to Checkpoint, new coronavirus-related domains are being registered at very high rates, and many of them are malicious.

- Over 4,000 coronavirus-related domains registered in January and February 2020.
- Coronavirus-themed domains are 50% more likely to be malicious compared to other domains.
- Over 6,000 coronavirus-related domains were registered in the third week of March 2020.
Coronavirus-themed campaign volume (Jan – July 2020):

As the coronavirus/COVID-19 pandemic spread, several real-time infection maps were created:

LEADERSHIP FOR IT SECURITY & PRIVACY ACROSS HHS
HHS CYBERSECURITY PROGRAM
OFFICE OF INFORMATION SECURITY
Internet of Medical Things and Healthcare Security in 2020

• Wearables and Internet of Medical Things (IoMT):
  o Transmit real-time patient health data to doctors (remote patient monitoring)
  o According to Anthem, 86% of doctors say they increase patient engagement with their own health
  o Predicted to decrease hospital costs by 16% in the next five years
  o The market for IoMT generally, and wearables specifically, is expected to increase significantly – it’s already happening!

• U.S. IoMT market:
  o $70B in 2020
  o Predicted to be $190B by 2025

Product Evaluations
Recipients of this and other Healthcare Sector Cybersecurity Coordination Center (HC3) Threat Intelligence products are highly encouraged to provide feedback to HC3@HHS.GOV.

Requests for Information
Need information on a specific cybersecurity topic? Send your request for information (RFI) to HC3@HHS.GOV or call us Monday-Friday between 9am-5pm (EST) at 202-691-2110.
HC3 works with private and public sector partners to improve cybersecurity throughout the Healthcare and Public Health (HPH) Sector

**Products**

**Sector & Victim Notifications**
Directs communications to victims or potential victims of compromises, vulnerable equipment, or PII/PHI theft, and general notifications to the HPH about currently impacting threats via the HHS OIG.

**White Papers**
Document that provides in-depth information on a cybersecurity topic to increase comprehensive situational awareness and provide risk recommendations to a wide audience.

**Threat Briefings & Webinar**
Briefing document and presentation that provides actionable information on health sector cybersecurity threats and mitigations. Analysts present current cybersecurity topics, engage in discussions with participants on current threats, and highlight best practices and mitigation tactics.

Need information on a specific cybersecurity topic, or want to join our Listserv? Send your request for information (RFI) to HC3@HHS.GOV, or call us Monday-Friday between 9am-5pm (EST) at 202-691-2110.
