Increasing HPV Vaccine Coverage in the United States

Melinda Wharton, MD, MPH
Director, Immunization Services Division
National Center for Immunization and Respiratory Diseases

National Vaccine Advisory Committee
February 7, 2018
Outline of Presentation

- Brief review of timeline for ACIP’s recommendations for HPV vaccination
- 2016 National Immunization Survey (NIS)-Teen results
- Brief review of some of the activities CDC has undertaken since 2013 to increase HPV vaccine coverage
- Current thoughts about strategies and scale
Timeline of ACIP’s Recommendations for HPV Vaccination

- **June 2006**: ACIP recommended HPV4 as a 3 dose series for females at age 11-12 years, with catch up for those 13-26 years who were not previously vaccinated. HPV4 can be given as young as age 9 years.
- **October 2009**: ACIP updated recommendations to include HPV2 for use in females and provided guidance that HPV4 could be used in males.
- **October 2011**: ACIP recommended HPV4 as a 3 dose series for males at age 11-12 years, with catch up for those 13-21 years who were not previously vaccinated. HPV4 can be given to males 9-26 years of age.
- **February 2015**: ACIP updated recommendations to include HPV9 as a 3 dose series for use in both males and females.
- **October 2016**: ACIP recommended 2 doses of HPV vaccine, at least 6 months apart, for adolescents beginning the vaccine series before their 15th birthday and are immunocompetent, and 3-doses of HPV vaccine for persons 15-26 years of age or persons who are immunocompromised.
National Immunization Survey (NIS)-Teen Methodology

- Conducted annually since 2006
- Conducted among parents and guardians of eligible adolescents identified using a random-digit-dialed sample of landline and cellular telephone numbers
- Two phases:
  - Household interview
  - Mailed survey to vaccination providers to collect vaccination history
- All vaccination coverage estimates based on provider-reported vaccination histories
2016 NIS-Teen New HPV Vaccine Coverage Measures

- HPV vaccine measure for females and males combined
  - to reflect the convergence of vaccination coverage among the two groups
- HPV up-to-date (HPV UTD) measure
  - to account for the revised HPV vaccination schedule.
  - HPV UTD includes
    - those who received \( \geq 3 \) HPV vaccine doses, or
    - (1) those who received 2 HPV vaccine doses, (2) the first HPV vaccine dose was initiated before age 15 years, and (3) the interval between the first and second dose was at least 5 months minus 4 days.
Estimated Vaccination Coverage among Adolescents Aged 13-17 Years, NIS-Teen, United States, 2006-2016

* APD = Adequate provider data
† ≥2 doses MenACWY among adolescents aged 17 years
Coverage with ≥1 Tdap and ≥1 MenACWY among Adolescents Aged 13-17 Years, by Age at Interview, NIS-Teen, United States, 2016

* Statistically different from adolescents aged 13 years at interview (p<0.05)
Coverage with ≥1 HPV Vaccine Dose among Adolescents Aged 13-17 Years, by Age at Interview, NIS-Teen, United States, 2016

* Statistically different from adolescents aged 13 years at interview (p<0.05)
Vaccination Coverage Estimates among Adolescents Aged 13-17 Years by Poverty Status, NIS-Teen, United States, 2016

* Statistically different from adolescents at or above the poverty level (p<0.05).
Adolescents with unknown poverty status (n=724) were excluded from analysis.
Vaccination Coverage Estimates among Adolescents Aged 13-17 Years by MSA status, NIS-Teen, United States, 2016

MSA = Metropolitan statistical area

* Statistically different from adolescents living in MSA central cities (p<0.05).
Vaccination Coverage Estimates among Adolescents Aged 13-17 Years by Race/Ethnicity, NIS-Teen, United States, 2016

* Statistically different from White, Non-Hispanic adolescents (p<0.05).
Estimated Vaccination Coverage with \( \geq 1 \) HPV, Adolescents Aged 13-17 Years, NIS-Teen, United States, 2016

Coverage ranged from 43.4% (Wyoming) to 88.9% (Rhode Island)
Average Annual Increase in Coverage with ≥1 HPV, Adolescents Aged 13-17 Years, NIS-Teen, United States, 2013-2016

The greatest statistically significant average annual increases were in New York City (7.7 percentage points), Nevada (7.6), Maryland (7.4), New York (7.2), and Alaska (7.1)
Selected NCIRD-Supported Activities to Improve HPV Vaccine Coverage, 2013-2018

- Partner with national provider and quality improvement organizations
- National HPV Vaccination Roundtable (with CDC’s Division of Cancer Prevention and Control)
- Multicomponent intervention to improve HPV vaccination in 22 jurisdictions
- Technical assistance to selected states to
  - Support stakeholder engagement
  - Develop statewide plans
  - Implement effective strategies
- NACCHO partnership
- Support health services research in large health systems
- Communications campaigns targeting both providers and parents of pre-teen children
Clinicians
8 Research Studies Conducted
7 CEU Activities Produced

HEDIS Measures for HPV Vaccine Coverage

- CDC partnered with the National Committee for Quality Assurance (NCQA) to develop a HEDIS measure for HPV vaccination coverage of girls – Proportion of girls who have received three doses of HPV vaccine by their 13th birthday
- The measure was first publicly reported in HEDIS 2014 (MMWR 2015)
- The NCQA/HEDIS was included Core Set of Children’s Health Care Quality Measures for Medicaid and CHIP in FY2014
- CDC partnered with NCQA to update the measure:
  - HEDIS 2017: include receipt of 3 doses of HPV vaccine by age 13 in the Adolescent Immunization measure
  - HEDIS 2018: align with the ACIP’s recommendation for a 2 dose series
Improving HPV Vaccine Coverage in the United States

- Provider-level interventions are effective, but difficult to bring to scale
- Ongoing engagement and coalition-building at the national, state, and local level continues to be important
- Updated Adolescent Immunization measure in HEDIS 2018 provides an opportunity for systems interventions
  - State level: encouraging state planning efforts to include major payers and health systems, including Medicaid managed care organizations
  - National level: including HPV vaccine coverage in conversations with national payers, the health systems sector, and Medicaid
