The National HPV Vaccination Roundtable

Taking Action to Help Save Lives

The purpose of the National HPV Vaccination Roundtable is to increase HPV vaccination coverage. Key activities include increased awareness, provider education, public education, systems changes, and health policy efforts. The American Cancer Society has led the development of the Roundtable by convening a national coalition of public, private, and voluntary organizations dedicated to increasing HPV vaccination coverage in the United States. Through coordinated leadership, strategic planning, and action, we can reduce HPV-associated cancers and related deaths.

HPV Vaccination and Cancer

Nearly all cases of cervical cancer are caused by infection with high-risk types of human papillomavirus (HPV). The virus also has been linked to cancers of the vagina, vulva, anus, penis, and throat.

HPV vaccination prevents infection by virus types that cause the vast majority of these cancers and genital warts, but the vaccine works only if given well before an infection occurs. That's why, in part, the American Cancer Society recommends it at ages 11 to 12.

Vaccination at these younger ages also leads to a greater immune response.

Despite the power of HPV vaccination to prevent cervical cancer, only one-third of adolescent girls have completed the 3-dose series. The CDC reports that vaccination coverage increased slightly between 2012 and 2013 but remains too low.

In 2014, the President's Cancer Panel released a report calling "underuse of HPV vaccines a serious but correctable threat to progress against cancer."

What the Society Will Do

The National HPV Vaccination Roundtable develops and implements pilot projects focused on overcoming barriers to HPV vaccination by focusing on five priority areas.

- **Providers** – Strengthen HPV vaccination recommendations and decrease missed opportunities.
- **Parents** – Educate and raise awareness about the importance of vaccinating males and females ages 11-12 to prevent cancers and to increase acceptance of vaccination against HPV infection.
- **Systems** – Address barriers such as the inadequate reimbursement for vaccine administration and the lack of reminder systems.
- **Policies** – Maximize access to and opportunities for vaccination (e.g., by considering alternative settings such as pharmacies).
- **Health Disparities** – For underserved populations at highest risk for cervical and other HPV-associated cancers, address barriers including cultural factors, distrust of the medical system, and limited access to health care.

Vaccinate Adolescents against Cancers

Taking Action to Save Lives

HPV Vaccination and Cancer

Nearly all cases of cervical cancer are caused by infection with high-risk types of human papillomavirus, or HPV, and the virus also has been linked to cancers of the vagina, vulva, anus, penis, and throat.

HPV vaccination prevents infection by virus types that cause the vast majority of these cancers and genital warts, but the vaccine works only if given well before an infection occurs. This is why, in part, the American Cancer Society recommends it at ages 11 to 12. Vaccination at younger ages also leads to a greater immune response.

Despite the power of HPV vaccination to prevent cervical cancer, only one-third of adolescent girls have completed the 3-dose series. The CDC reports that vaccination coverage increased slightly between 2012 and 2013 but remains too low.

The President's Cancer Panel released a report calling "underuse of HPV vaccines a serious but correctable threat to progress against cancer."

The HPV VACs Project (Vaccinate Adolescents against Cancers) is aimed at increasing HPV vaccination rates for adolescents across the nation through improved provider awareness and education and improved system-wide processes. With a 6.4 million dollar grant from the Centers for Disease Control and Prevention, ACS will expand current cancer prevention and early detection activities with federally qualified healthcare centers (FQHCs) to increase HPV vaccination through improved provider awareness and education and improved system-wide processes. Additionally, ACS will partner with state health departments and other state-based entities to facilitate systems changes that increase the availability and utilization of the HPV vaccine.

What We Will Do?

- Provide direct clinician outreach and training activities through 30 FQHC Partnerships
- Implement 2-year Practice Change Pilot projects with FQHCs to increase HPV vaccination rates
- Develop and implement Electronic Health Record and other tracking tools to measure vaccination processes and rates
- Partner with state health departments and state-based health care plans to provide clinician education and training
- Disseminate CDC and other evidence-based educational materials to clinicians and constituents
- Increase national partnerships that strengthen HPV vaccination rates

Mission

The National HPV Vaccination Roundtable is a national coalition of organizations working together to prevent HPV-associated cancers and pre-cancers by increasing and sustaining U.S. HPV vaccination.

Supported by grant #1H23IP000931-01, funded by the Centers for Disease Control and Prevention

Roundtable Members

- Academic Institutions/Cancer Centers
- Advocacy and Survivors
- Cancer Prevention
- Communication
- Government Agencies
- Immunization
- Insurance
- Populations at High-Risk
- Providers/Professional Societies
- Public Health
- State-based Organizations
- Quality Improvement
- Research
- Training
- Vaccine Manufacturing

Member list: <http://www.cancer.org/healthy/informationforhealthcareprofessionals/nationalhpvroundtable/hpv-vaccination-roundtable-member-organization>

HPV Vaccination Roundtable

Task Groups

Topic	Chair
Best Practices	Paul Reiter, OSU
Electronic Health Records/IIS	Paul Throne, WA DOH
National Campaign	Marsha Wilson, FWC
Pharmacy-Located Vaccination	Bruce Gellin, NVPO
Provider Training	Sharon Humiston, AAP
School-Based Parent Education	Tami Thomas, NAPNAP
Survivor Involvement	Rebecca Perkins, ACOG

Best Practices Task Group

Best Practices Conference, August 29, 2016

National conference to convene researchers, clinicians, and other stakeholders to identify promising and best practices for increasing HPV vaccine coverage

Electronic Health Records/ Immunization Registries Task Group

Literature Scan and White Paper

Literature scan identifying HPV electronic health records/ immunization registries processes

White paper based on qualitative interviews that describes the barriers (technological and behavioral), that prevent health care providers from using their EHR and Immunization Registries effectively to support on-time, complete HPV vaccination

National Campaign Task Group

Communications Tools

“Dear Provider” letter template and accompanying HPV materials “packet” health plans can send to providers in their networks

Two case-studies that illustrate what successful use of state-based data to inform local HPV immunization efforts looks like

A universal HPV vaccination symbol or slogan for HPV Roundtable members and their stakeholder networks

Pharmacy-Located HPV Vaccination Task Group

Pilot Projects

Pilot test of referral network where medical provider conducts the initial assessment, education, administration, and documentation of the first HPV dose and the community pharmacy administers and documents administration of the second and third doses

Provider Training Task Group

Training and Education Tools for Providers

HPV Vaccination Resource and Education Clearinghouse:

CME/CEU for AFIX and Office Detail Visits Module

HPV-associated Oropharyngeal Cancer Training Video

Survivor Involvement Task Group

Resources for Increasing Survivor Involvement

HPV-Cancer Survivor Speakers Database

HPV-Cancer Survivor Videos (when in-person speaker is not possible)

National Meeting

August 29 – 30, 2016

A two-day meeting in Atlanta, Georgia, to convene the Roundtable members and present the efforts of the various Task Groups
