I would just like to inform you that this is a real problem. Doctors should be more caring when it comes to CFS. CFS sufferers do not want pity we want you to simply understand how much we struggle everyday. The medical system, for the most part, thinks it's in our heads. We are passed around like hot potatos using what little energy we have in hopes of finding some kind of help. Our own government doesnt fully recognize our issues. Please all I ask is that someone can help us....will it be you?
