Subject: Upcoming Study on Vaccines

Hi Rose,

I wanted to make you aware of an upcoming pre-print publication in *Academic Pediatrics* titled, *Association Between Aluminum Exposure from Vaccines Before Age 24 Months and Persistent Asthma at Age 24-59 Months (Academic Pediatrics); Aluminum adjuvants in childhood vaccines and asthma risk: What do we see? (Commentary, Academic Pediatrics)*.

It is a new observational study suggesting a possible association between exposure to aluminum in some childhood vaccines and development of persistent asthma in children. It's a CDC funded study that will publish early tomorrow in the United Kingdom. CDC is doing some partner outreach today and we expect some press to come out tomorrow, as CDC has been doing media interviews this week. We wanted to let you know our plan for hill outreach. More specifically, the plan is:

- This afternoon – embargo calls to committees of jurisdiction staff and member offices who have asked to get a heads up when these types of articles are published, (i.e., Rep. Schrier and Senator Schatz)
- Tomorrow morning – an email summarizing the publication to congressional leadership and committees of jurisdiction staff and interested offices with the article attached. CDC will also offer to schedule briefings for staff if requested.
- Next week – possible briefings if requested

Let me know if you have comments or concerns.

Thank you,

Christina Castillo Serna, MS

Subject: CDC Friday Rollouts
Date: 2022/09/22 17:36:49
Priority: Normal
Type: Note

Liz and Alicia,

I wanted to flag two things coming out tomorrow for awareness. Feel free to call and chat if needed and please direct any questions that come in tomorrow my way!

1. • Study on Vaccines, Aluminum Exposure, and Asthma

I wanted to make you aware of an upcoming pre-print publication in *Academic Pediatrics* titled, *Association Between Aluminum Exposure from Vaccines Before Age 24 Months and Persistent Asthma at Age 24-59 Months (Academic Pediatrics); Aluminum adjuvants in childhood vaccines and asthma risk: What do we see? (Commentary, Academic Pediatrics)*.

It is a new observational study suggesting a possible association between exposure to aluminum in some childhood vaccines and development of persistent asthma in children. It's a CDC funded study that will publish early tomorrow in the United Kingdom. CDC is doing some partner outreach today and we expect some press to come out tomorrow. Hill outreach plan:

- This afternoon – embargoed calls to committees of jurisdiction staff and member offices who have asked to get a heads up when these types of articles are published, (i.e., Rep. Schrier and Senator Schatz)
- Tomorrow morning – an email summarizing the publication to congressional leadership and committees of jurisdiction staff and interested offices with the article attached. CDC will also offer to schedule briefings for staff if requested.
- Next week – possible briefings if requested

2. • Infection Prevention Control Guidance Update

We are expecting a suite of infection prevention and control guidance updates to be released tomorrow at 3pm. I've included a chart below that summarizes when source control is recommended (mask/distancing). We do expect there to be concern from the disability community so you will note specific outreach to offices we've been fielding these questions from below.

Hill outreach plan:

Morning of (pre-release): embargoed staff courtesy calls to Appropriators, HELP/E&C Authorizers, Leadership, Wyden/Casey

Mid/late afternoon (post-release): spotlight in the Friday Outbreak newsletter

- • Targeted follow-ups with:
 - • Kuster, Lankford (recently expressed interest in Nursing Home guidance)
 - • Disability interest: Duckworth, Warren, Kaine, Markey, Casey, Wyden

Chart to explain Source Control and Screening Testing based on SARS-CoV-2 County Transmission Levels.

Updated healthcare infection prevention and control recommendations based on SARS-CoV-2 County Transmission		
	Community Transmission Levels	
	Low/Moderate/Substantial	High
Source Control	<p>Source control still recommended for individuals in healthcare settings who:</p> <ul style="list-style-type: none"> • • Have suspected or confirmed SARS-CoV-2 infection or other respiratory infection (e.g., those with runny nose, cough, sneeze); or • • Had <u>close contact</u> (patients and visitors) or a <u>higher-risk exposure</u> (HCP) with someone with SARS-CoV-2 infection for 10 days after their exposure; or • • Reside or work on a unit or area of the facility experiencing a SARS-CoV-2 outbreak; universal use of source control could be discontinued as a mitigation measure once no new cases have been identified for 14 days • • Have otherwise had source control recommended by public health authorities <p>Individuals might also choose to continue using source control based on personal preference, informed by their perceived level of risk for infection based on their recent activities (e.g., attending crowded indoor gatherings with poor ventilation) and their potential for developing severe disease. For example, if an individual or someone in their household is at <u>increased risk for severe disease</u>, they should consider wearing masks or respirators that provide more protection because of better filtration and fit to reduce exposure and infection risk, even if source control is not otherwise required by the facility. HCP and healthcare facilities might also consider using or recommending source control when caring</p>	<p>Recommended for everyone in a healthcare setting when they are in areas of the healthcare facility where they could encounter patients.</p> <ul style="list-style-type: none"> • • HCP could choose not to wear source control when they are in well-defined areas that are restricted from patient access (e.g., staff meeting rooms) if they do not otherwise meet the criteria described below and <u>Community Levels</u> are not also high. When <u>Community Levels</u> are high, source control is recommended for everyone.

	for patients who are moderately to severely immunocompromised.	
Screening Testing	At the discretion of the healthcare facility	Recommended for residents being admitted to nursing homes; for other settings/circumstances at the discretion of the healthcare facility.

Subject: Next ACIP Meeting (June 21-23)

Hi both –

Now that we are past May 11, I am assuming we don't have to follow the same process for our ACIP meetings when COVID is on the agenda – FDA and CRT awareness to be specific.

For our meeting in June, COVID is on the agenda as a discussion topic (not a vote), along with a bunch of other things (list below).

Do you want to keep a process where we let you know what's on the agenda and if so, does it need to be before it is posted?

Thank you,
Sherri

RSV vaccine (older adults)
Polio
Influenza
Pneumococcal vaccine
Dengue
Chikungunya
RSV (nirsevimab/maternal vaccine)
Mpox
Vaccine safety update (asthma/aluminum)
COVID-19

CLOSE HOLD

We wanted to make you aware of a publication coming out in the next 1-2 weeks in Academic Pediatrics showing a relationship between exposure to aluminum in childhood vaccines and development of asthma. We have looped in FDA, as well. This publication has been in the works for several years. We are working on reactive talking points to say this is part of our continual work to support transparency and safety of vaccines. Kevin is looped in for ASPA and WH Comm, thanks
