Executive Summary
The FBI shared indicators of compromise (IOCs) associated with the Hive ransomware, which they believe “likely operates as an affiliate-based ransomware.” While Hive uses multiple methods to comprise victims’ networks, the FBI highlighted “phishing emails with malicious attachments.” Once a victim’s network is compromised Hive provides “two to six days” for payment of the ransom by the victim. If the ransom is not paid, Hive leaks their victim’s data to their Tor website, HiveLeaks.

Because Hive uses legitimate applications to further their compromise of a victim’s network, “the FBI recommends removing any application not deemed necessary for day-to-day operations.”

Report
FBI – Flash Alert (MU-000150-MW) Indicators of Compromise Associated with Hive Ransomware

Impact to HPH Sector
As recently as August 2021, Hive has victimized entities in the Healthcare and Public Health (HPH) Sector. Sector entities targeted by ransomware could have some or all of their data leaked if a ransom is not paid and experience disruptions to services provided to their patients and customers.
