@CUsafepatient

Hospital acquired infections
722,000
1 in every 25 patients
75,000 deaths
(every 9 patients with HAIs will die during hospitalization

Deaths related to Antibiotic Resistant Infections or Antibiotic overuse MRSA – 11,285 *C.difficile* – 14,000

### 3 key components to prevention

Public Reporting

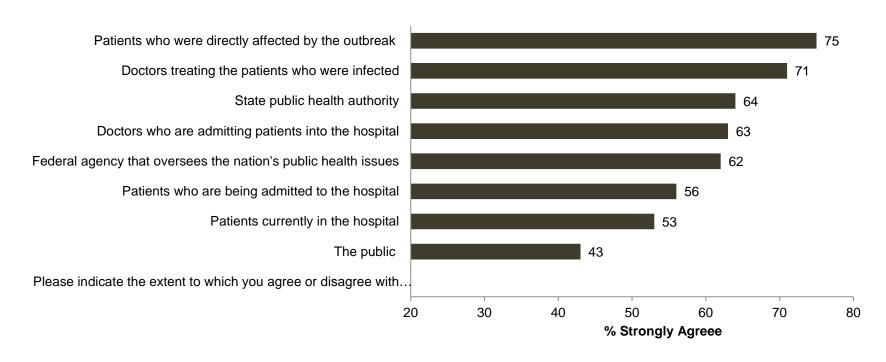

Training – Education – Best Practices Financial incentives and financial penalties

#### **Outbreaks**

- Notify patients who are affected & their doctors
- Notify public health authorities: local, state, federal
- Notify patients who may be affected
- Notify the public
- Foodborne Outbreak Online Database (FOOD Tool)

Mary Brennan Taylor, NY: "Our health department has been ineffectual; minimizing when any type of infection outbreak occurs is infuriating"

#### Who Should be Informed When a Hospital Outbreak Occurs?

## Engaging patients through 2-way communication

- (1) Inform re exposure, educate re colonization
  - Heater-cooler devices; Duodenoscopes
- (2) Patient reporting of healthcare-acquired infections
  - FDA MedWatch: Adverse events for drugs, devices
  - CDC Vaccine Adverse Event Reporting System
  - Health Dept reporting systems for food poisoning
  - NO system for reporting infections

#### "Firewall" v. Collaboration

- Experts in infection control + inspectors/regulators
- Use all tools in the toolbox
- Review HAI data before inspections & investigations
- Year of significantly high infection rates = complaint
- Enforce prevention improvements: corrective action plans based on history & with the help of experts

Kathy Day, Maine: There was an outbreak and the state had to get "permission" to go into that facility.

#### Mandates Work

- Hospital staff: if it is not mandated, it will not get done.
- VA MRSA experience
- Missed opportunity: no mandated antibiotic stewardship programs and no tracking of whether the voluntary ones are working
- Medicare payment policies tied to doing the right thing providing the right antibiotics, using Rx'g data to identify when and where overuse and inappropriate use is happening
