Vaccines are made and filled/finished by the manufacturers.

Pfizer and Moderna vaccines are transported to Pfizer’s kitting facility where they are prepared for distribution.

Pfizer Ancillary MegaKits are delivered directly to UPS & FedEx facilities for distribution.

Once at the distribution centers, Moderna vaccines and ancillary kits stage before moving to the states and jurisdictions.

Dry Ice Recharge Kits are delivered to administration sites for Pfizer vaccines.

Distribution takes place through various channels including hospitals, long-term care facilities, pharmacies, doctor's offices, large clinics, outpatient facilities, public health clinics, mobile units, and other federal entity sites.
